1. General Description.

The IS-CHPMP is a DC/DC voltage step-up converter with an input of 2.7-5.5V and an output of 16V for use in driving OLED displays. The IS-CHPMP utilizes Maxim's MAX8574 step-up converter to take advantage of its floating output during shutdown mode. A 2x4 .100" header is required to interface with charge pump.

IS-CHPMP is RoHS compliant.

Photo 2, Secondary side

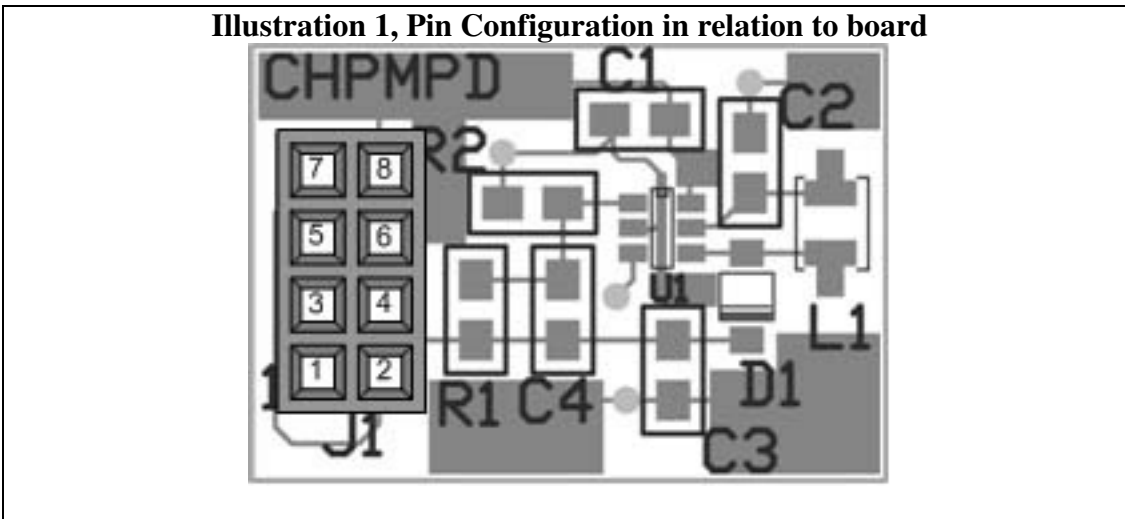

2. Electrical Characteristics

- 2.7-5.5V Input Voltage.
- 16V Output Voltage.
- Floating output when in shutdown mode.
- Current .05uA typical, 1uA maximum in shutdown mode.

3. Pin Configurations

Pin	Name	Function
1	V3.3	Input voltage supply between 2.7-5V.
2	V16	Output voltage preset to 16V.
3	SHTDN	Shutdown input. A logic high puts the MAX8574 into normal operation. A logic low at SHTDN places the MAX8574 into low-power shutdown mode.
4	GND	Ground
5	GND	Ground
6	SHTDN	Shutdown input. A logic high puts the MAX8574 into normal operation. A logic low at SHTDN places the MAX8574 into low-power shutdown mode.
7	V16	Output voltage preset to 16V.
8	V3.3	Input voltage supply between 2.7-5V.

Illustration 1, Pin Configuration in relation to board

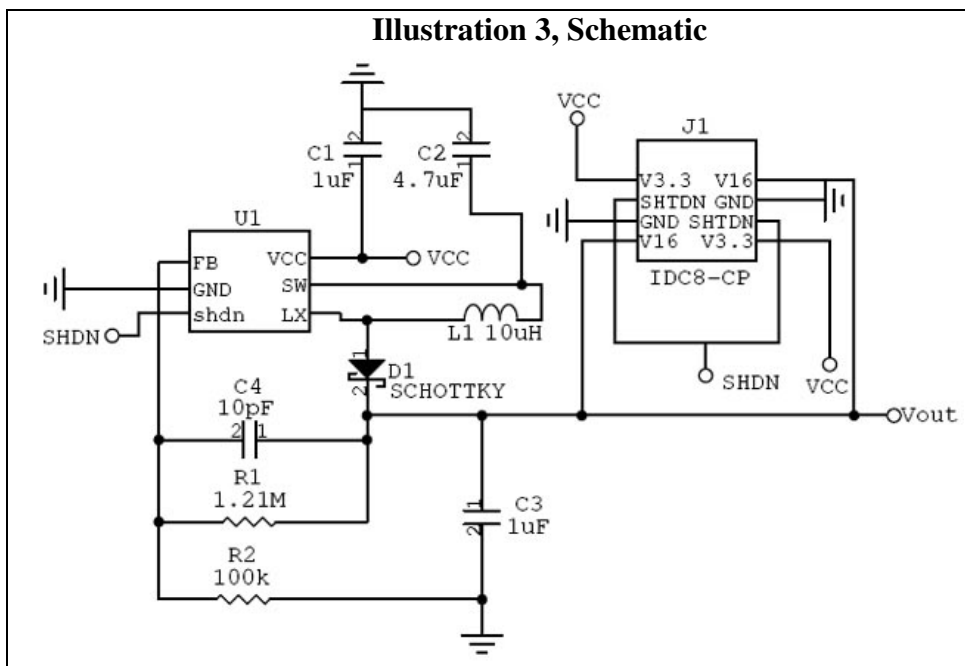

Note: Incorrect installation of the connector could damage the charge pump and/or the motherboard.

4. Typical Operating Characteristics

- 4.1. Testing was done using 3.3V input with constant load. Load was set for 16V output operation then increased until output voltage dropped 200mV.
- 4.2. Testing was done on eleven assemblies with a variation of 1% of graph.
