DISTINCTIVE CHARACTERISTICS

- Nonilluminated options in 4 or 16 keys, illuminated choices in 12 or 16 keys
- 1.0mm (.039") tail pitch
- Easily integrated into designs: replaces multiple mechanical switches, soldered wires and cable assemblies
- Card insertion into design supports customized legends for nonilluminated models
- Actuating dome offers crisp, tactile feedback to positively indicate circuit transfer
- Illuminated models feature legends on embossed keypads
- Adhesive backing for easy mounting

GENERAL SPECIFICATIONS

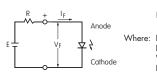

Power Level	20mA @ 24V DC		
Contact Resistance	500Ω maximum (10mA @ 10V DC)		
Insulation Resistance	100 megohms minimum @ 250V DC minimum		
Dielectric Strength	250V AC minimum for one minute minimum		
Operational Life	1,000,000 operations minimum		
Contact Timing	10 milliseconds maximum		
Nominal Operating Force	1.0N ~ 6.0N		
Stroke: Nonilluminated Illuminated with Overlay	.016" ~ .039" (0.4mm ~ 1.0mm) .020" ~ .047" (0.5mm ~ 1.2mm)		
Operating Temperature Pance	-15°C ~ +50°C (+5°F ~ +122°F) illuminated		
Operating Temperature Range	−15°C ~ +55°C (+5°F ~ +131°F) nonilluminated		

LED SPECIFICATIONS

Single Element LED Color: Amber				
Forward Voltage (Typical)	V _F	2.1	٧	
Forward Current (Typical)	I _F	20	mA	
Forward Current (Maximum)	I _F	30	mA	
* Forward Peak Current (Max)	I _{FM}	195	mA	
Reverse Voltage (Maximum)	V _R	5.0	٧	

The electrical specifications shown are determined at a basic temperature of 25°C. LED is an integral part of the switch. LEDs are not sold separately.

R = Resistor Value (Ohms) E = Source Voltage (V) V_F = Forward Voltage (V) = Forward Current (A)

LED circuits are isolated and require an external power source. If the source voltage exceeds the rated voltage, a ballast resistor is required.

* Note: Pulse width 0.1msec maximum with a maximum duty cycle ratio of 1/10

INSERTABLE LEGEND CARDS

Instructions for Customizing Insertable Legends

Series FM

The membrane keypad assembly comes with three insertable legend cards: yellow, gray and black. The following provides guidelines for creating and insertion of legend cards for the membrane switch keypad assembly. Read all of the instructions prior to customizing and inserting the legend card.

- Using the borders on the insertable legend card as a guide, be sure characters on the card are about 1.5mm (.059") within these borders. This is the printable area.
- Legend characters may be drawn, printed, etc. Be sure that application choice is completely dry before inserting into membrane keypad assembly.

Instructions for Inserting Legend Card

- Note correct orientation of insertable legend card. Insert card under surface sheet, and use caution to avoid bending the membrane keypad assembly. Do not use pointed object to insert card, and do not remove surface sheet.
- Align and center all legend characters within the squares of the surface sheet.
- Smooth any wrinkles or air pockets from surface sheet.
- Peel off adhesive strip from the membrane keypad assembly.
- The legend card is now firmly in place and cannot be removed.
- Detach the protective film.

Recommended Connectors for 5 Pin

Recommended Connectors for 8 Pin

PRECAUTIONS FOR HANDLING

- Assembly of legend card insert is handled by the customer. Therefore, we recommend to evaluate the finished product with the card
- Nonilluminated products have a loophole on each key. It is possible to add optional illumination by installing appropriate LEDs. Legend card does not have loopholes.
- To test proper electrical operation of switches, use of an electric buzzer is recommended.
- Use an additional chattering prevention circuit for the switch circuit.
- Do not operate switches with pointed objects (i.e. screwdrivers) to prevent perforation of film overlay.
- Use an FPC connector that corresponds to the printed circuit. Contact factory for suitable connectors.
- During assembly and installation of legends place devices on a level, sturdy surface. We do not recommend assembly and installation of device using a free hand or on a soft surface.
- Do not fold, bend, or apply pressure to the product.
- These devices contain adhesive that may emit noise. This does not affect product functionality.
- Do not depress any switch areas during assembly/installation.
- These membrane switches are built with air vents. Prior to installation, make corresponding holes to allow air vents to function. These holes should first be aligned with the membrane switch device, then made on the body of the final installation structure. Do not allow water or oil to penetrate through the air vents. Entry of any liquids through the air vents may cause contact failure.

APPLICATIONS

- Communication equipment
- Office machines

• Electronic equipment for national security

Automation equipment

- Electronic equipment
- Amusement equipment
