Tit Switches

## Distinctive Characteristics

## DSA

Environmentally friendly, contains no mercury.
High contact reliability due to sealed body.
The switch is triggered when tilted beyond $\pm 10^{\circ}$ of the horizontal.
PCB adaptor available as an accessory.

## DSB

Photo interrupter, rather than contacts, ensures high reliability. 1 million operations minimum.

Sealed construction for protection from environmental elements, including hydrogen sulfide, sulfur dioxide, and nitrogen hydroxide. Terminals are made of ammonia-resistant materials.

Totally sealed body allows process compatibility for timeand money-saving automatic soldering and cleaning.

Space-saving compact dimensions allow high density mounting.
Internal steel ball movement allows functionality of $360^{\circ}$ circumference rotation.

The DSB series switch is well-suited to meet product safety concerns due to normally closed (on) status.

Crimped terminals ensure secure mounting and prevent dislodging during wave soldering.

The switch is triggered when tilted beyond $\pm 30^{\circ}$ of the horizontal.
